Prefabrication techniques of scrubbers and heating/cooling systems

Prismafilter 

Prefabrication can save a lot of money because on-site assembly is often difficult. Prismafilter can relieve you of this by supplying assembled materials.

When supplying an architectural air scrubber, the technology is completely prefabricated. Of course, the air scrubber can also be delivered fully assembled, fitting into a sea container.

For heating/cooling systems, or possibly combined with a heat pump, we also supply fully assembled units

At Prismafilter, we specialise in prefabricated technical installations that are both efficient and sustainable. Our prefabricated elements are produced in controlled environment, ensuring high quality and precision. This significantly reduces construction time and reduces failure costs on site.

We offer a wide range of prefabricated solutions, air scrubbers and heat recovery. Each project is tailor-made, tailored to the specific needs of our customers. With attention to detail and the use of high-quality materials, we guarantee not only quick delivery, but also a longevity of our products.

Our expertise in prefabrication techniques enables us to create innovative designs that are not only functional but also aesthetically pleasing. Sustainability is our top priority.

Choose precast with us and experience the benefits of efficiency, quality and sustainability in your project!
